

DARTDRONES

Flying into the Future

DARTdrones Flight School is the national leader in drone education. DARTdrones' mission is to help drone pilots fly better, safer, and in accordance with the FAA's rules and regulations. Drones will change the world, but in order to do so safely, they must be safely integrated into the national airspace. DARTdrones aims to work with the FAA and drone pilots to facilitate this integration by providing best-in-class education, hands-on training, and on-going support. By developing pilots with a comprehensive understanding of the equipment and up-to-date knowledge of the laws and regulations, DARTdrones hopes to positively affect the course of the drone industry.

The company has been fortunate to win several business competitions—including the Babson BETA Challenge—and to be included in the WIN Lab and the Babson Summer Venture. This has allowed DARTdrones to grow quickly and keep up with the demand for top-flight drone training and education.

We pride ourselves on our expert flight captains who have extensive experience flying both manned and unmanned aircraft. The DARTdrones curriculum has been refined over the past year and half, and is constantly being updated based on changes in technology, regulations, and the input from our Flight Captains and program graduates.

Founder and CEO

Abby Speicher is a graduate of the Babson F.W. Olin Graduate School of Business' MBA program. Abby specializes in development of human resources in a startup, customer focused design, and quality and performance metric controls. Abby serves as DARTdrones' CEO. She has previous entrepreneurial experience founding a social enterprise in 2008.
