

DARTDRONES

Wings Program FAQ's

I am new to drones. Is this package too advanced?

Many people that take our courses are brand new to drones and flying for the first time in the class. The course starts with the basics for beginners, and then goes into more extensive sUAS knowledge through the Real-World Flight Planning and Execution Program.

What do I do if I already have my Part 107 and flight experience?

If you have already taken and passed your Part 107 remote pilot certification exam AND have flight experience, you can start at step 3: Real-World Flight Planning and Execution Program.

How many days is the Drone Pilot Wings Program Package?

This package includes one full day of Drone Pilot Flight Training, one full day of Part 107 in-person training, and then full access to our Real-World Flight Planning and Execution Program which is online and can be completed at your own pace.

Can I bring my drone? What type of drone is available?

Our instructor provides a drone in the course, typically a DJI Phantom Series sUAS. For insurance and liability purposes, students CANNOT fly their own equipment during the course unless they provide proof of liability insurance with DART-drones LLC named as an additional insured prior to the course. Although our class covers the Mavic and Inspire, our instructors usually only have a Phantom which is sufficient for this level of training. Any insurance company that offers coverage for sUAS flight is sufficient for this course. Many students have used Verify as their provider. Verify is available in most states and allows for coverage to be purchased by the hour.

After I complete Step 2 (Part 107 Remote Pilot Certification), when will I be ready to take my exam?

Although we cover all of the content that you will need to study for the test, many students want to spend study time with our online Part 107 Test Prep course, especially the practice tests. We recommend not booking your exam until after you complete our class and feel ready.
